

MAS: Microcat LIVE Server Licence Solution

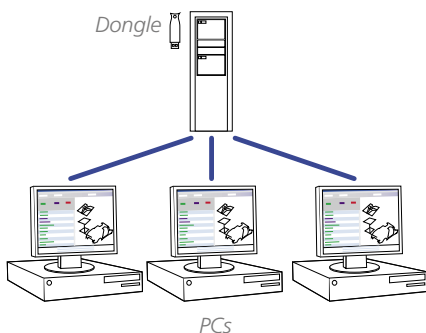

You now only need one security key (dongle) to use Microcat® LIVE™ across your entire network.

Infomedia has launched a network security key that provides your dealership with more flexible Microcat LIVE licensing options. By attaching a single security key to your server you are able to create a pool of licences accessible from any computer on your network. You no longer need a security key on every computer – just one on the server.

Standard Licensing

Concurrent Licensing

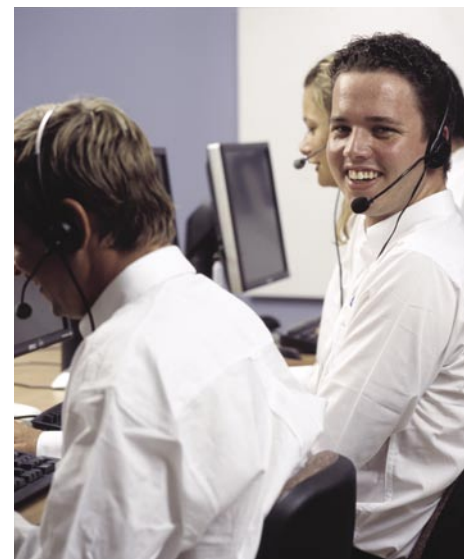

Microcat LIVE Server Licence Solution (MAS) is an additional piece of software that is supplied on a CD that installs to the server. The software can be configured to suit your individual needs.

MAS is easy to implement and has numerous benefits:

- MAS optimises licence usage and provides additional flexibility at no extra cost
- Additional licences can be acquired within 5 mins
- Licences are updated via the Internet
- Microcat LIVE is configured to detect the presence of MAS
- MAS allows Microcat LIVE to run in thin client environments such as Terminal Services
- Licences can be fixed for users who need constant access and you can also have concurrent licences that are available to users on a first come, first served basis.

To get started on MAS, all you need is a reliable internet connection and adequate system administrator expertise to install and maintain.

We would like to work with you to introduce the Microcat LIVE Network Solution into your dealership. If you would like more information about this flexible licensing opportunity, please contact the Customer Service Centre in your region.

Our Customer Service specialists are here to completely support the introduction of the network solution to your dealership.
